Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Multivariate Analysis of Pleistocene and Recent Coyotes (Canis Latrans) From California Influences from genetic and zoological research as well as evaluations of their own material have prompted paleontologists to greater concern for the nature and characteristics of the populations of which their fossil specimens are generally very small samples. This interest can lead to a consideration of possible ways of determining the extent and expression of inter and intrapopulation variation and the means whereby it may be taken into account. Methods of elucidating the relationships among populations, the units of evolution, are of prime importance. Multivariate analysis provides one mode of attack on these problems. The biological significance of linear measurements from a specimen with irregular morphology may be open to some question, but it is standard practice to use them in taxonomic studies - either actual dimensions or merely their relative proportions. The measurements taken of the coyotes are of the sort used in such studies. The proposed taxonomic distinctions among the canids considered here have been almost uniformly based on quantitative differences, as is indicated throughout. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
