

Remote, Real-time Water Quality Monitoring on the Bow River, Alberta, Canada

Filesize: 6.98 MB

Reviews

Unquestionably, this is the greatest job by any author. It really is simplistic but shocks inside the fifty percent in the book. I am just pleased to inform you that here is the greatest book i actually have go through within my own existence and could be he greatest ebook for at any time.

VDM Verlag Jun 2008, 2008. Taschenbuch. Book Condition: Neu. 220x150x5 mm. Neuware - The Bow River flows from the Rocky Mountains to the confluence with the Oldman River to form the South Saskatchewan River in southern Alberta. The major point source inputs to the Bow River are Calgary's wastewater treatment plants; the majornon-point source inputs are storm sewers. A real-time monitoring station was developed on the Bow River downstream of Calgary to evaluate the potential for continuous monitoring with event-initiated sampling for laboratory analyses. The station was effective for discerning short-term trends, estimating mass loads, assessing environmental impacts, and optimizing laboratory resources. Event sampling indicated that BOD, TSS, nitrate, and chloride concentrations rose significantly after storms. Concentrations were combined with discharge to estimate total daily loads during run off events. Chloride was used as a conservative tracer to map a wastewater effluent plume and compare relative attenuation of nutrients. 80 pp. Englisch.
