Brand New Book ***** Print on Demand *****.Excerpt from The Philosophical Review, Vol. 24 The Principle of Relativity is a mathematical principle by which spatial and temporal measurements are coordinated for observers in systems of reference which are in movement relatively to one another, and by which the equations are transformed when the observer passes from one system to another. Before we can understand the principle it is essential to understand the problem. Let us suppose that while we are seated in a room some genie, like the genie of the lamp in the story of Aladdin, were to transport the room at a high velocity to some other part of the world, are there any means by which, limited to inside observation, we could know that the room was moving and could calculate the velocity and direction of the movement? Or, let us suppose that it is not the room by itself, but the whole solar system which has suddenly started a movement through space at an enormous velocity, impelled, we may imagine, by the kick of some Micromegas at play in the universe.
