Each coral head consists of thousand of individual polyps. These polyps are continually budding and branching into genetically identical neighbors. Antony Garrett List People have always loved to build things, whether its a feat of engineering in an underground subway or the construction of the worlds tallest skyscraper. Thus, its somewhat ironic that the largest structure ever built was not made by humans but by incredibly tiny organisms known as coral polyps. Over the course of tens of thousands of years, these small organisms have put together a collection of nearly 3, 000 reefs that form a collective stretching across 130, 000 square miles. It is often mistakenly claimed that the Great Wall of China can be seen in space, but its absolutely true that the enormous Great Barrier Reef is visible. The sheer size of the Great Barrier Reef is mind-boggling, but its importance extends far past its...
