McGraw-Hill Education - Europe, United States, 2002. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Build the baddest bug in town! It walks on six legs, possesses practical artificial intelligence, utilizes state-of-the-art technology, and is incredibly inexpensive to build! This complete project book delivers all the step-by-step plans you need to construct your own six-legged insect-like robot that walks and actually responds to its environment. Using inexpensive off-the-shelf parts hobbyists can build a better bug and at the same time have loads of fun honing their knowledge of mechanical construction, programming, microcontroller use, and artificial intelligence. Written by an award-winning robotics expert, Insectronics fully explains PIC programming, use of sensors, and robot intelligence. It details tools and materials; covers obstacle avoidance, sonar room mapping, finding the best route, and maze solving. This title features an informative chapter on software that covers coordinating the servo motors for walking, monitoring infrared and sonar sensors, and controlling the output of sound and light emitting diodes. It includes a comprehensive chapter on robotic grippers; explains how to implement radio remote control to operate the robot up to 1 mile away; shows you how to give your robot unique personalized features; and tells you how to get it all done on a shoestring budget. If you want to follow the lead of robotics experts who are looking to insects for structural inspiration - and have hours of amusement - Insectronics belongs in your home workshop.
