The Character of the Star Image in Spectrographic Work (Classic Reprint) (Paperback)

By John Stanley Plaskett

Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from The Character of the Star Image in Spectrographic Work These experiments conclusively prove that the abnormal width of spectra and trails in photographic light is not due to aberrations in the spectroscope nor to atmospheric disturbances, and clearly point to aberrations in the condensing system as the cause of the observed effects. A short summary of the experimental data will render this more evident. The theoretical diameter of the central disk, or rather of the first dark ring, for visual light a 5600, is 0374, for photographic light, X 4340, is 0357. The actual width of visual spectra and trails is from 1 to or one and one-half to three times the theoretical diameter. The actual width of photographic spectra and trails is from 3 to or five to eight times the theoretical diameter. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the...
