## Screening for Thyroid Disease: Systematic Evidence Review Number 23

By U. S. Department of Health and Human Services

CreateSpace Independent Publishing Platform. Paperback. Condition: New. This item is printed on demand. 66 pages. Dimensions: 11.0in. x 8.5in. x 0.1in. Hyperthyroidism and hypothyroidism are common conditions that have lifelong effects on health. About 5 of U. S. adults report having thyroid disease or taking thyroid medication. In a cross-sectional study of 2,799 well-functioning adults aged 70-79, 9.7 of black women, 6 of white women, 3.2 of black men, and 2.2 of white men reported a history of hyperthyroidism. In the same study, 6.2 of black women, 16.5 of white women, 1.7 of black men, and 5.6 of white men reported a history of hypothyroidism. Hyperthyroidism has several causes. Graves disease, the most common intrinsic cause, is an autoimmune disorder associated with the development of long-acting thyroid stimulating antibodies (LATS). Single or multiple thyroid nodules that produce thyroid hormones can also cause hyperthyroidism. The use of excessive doses of the thyroid hormone supplement levothyroxine is also a common cause. The most common cause of hypothyroidism is thyroiditis due to antithyroid antibodies, a condition called Hashimoto's thyroiditis. Another common cause of hypothyroidism is prior treatment for Graves disease with surgery or radioiodine. Consequences of...
