

Core Standardized Methods For Rapid Biological Field Assessment (Paperback)

Filesize: 4.26 MB

Reviews

Thorough guideline! Its this type of good read. It is really simplistic but shocks from the 50 percent from the publication. It is extremely difficult to leave it before concluding, once you begin to read the book.
(Sallie Wiegand)

CORE STANDARDIZED METHODS FOR RAPID BIOLOGICAL FIELD ASSESSMENT (PAPERBACK)

Conservation International,U.S., United States, 2016. Paperback. Condition: New. Language: N/A. Brand New Book. Reliable, standardized and replicable methodologies for quickly assessing key ecosystem values in the field are essential for conservation planning and decision-making at the local to regional scale at which most threats occur. Rapid biological assessments are a cost-effective solution to this problem, providing data in a timely manner to address a wide range of conservation needs, and in particular to establish a baseline that can be used to detect changes over time.A great deal of high level methodological guidance exists, but most lack practical detail. A few books describe relatively comprehensive sampling methods but do not focus on a core set of standardized methods, making it difficult to decide which protocols to adopt. Other publications are available with lengthy, detailed guidance on sampling individual taxa. The editor believes this is the first book that focuses exclusively on a concise, practical set of standardized protocols for a wide range of taxa. This is no simple task. Many scientists tend to employ their own individualized, often opportunistic, approaches for finding as many species as possible in a short time, sometimes honed through decades of personal experience. These contributions are invaluable, yet do not address many conservation requirements.While not intended to replace these methods, the identification of a core, at-a-minimum set of standardized methods, including innovative and automated approaches where applicable, is of great importance for making the results of rapid surveys comparable and replicable across sites and over time. Typically, rapid assessments require at least one week per site. A critical and often unanswered question in baseline assessments is how to know when sampling effort is sufficient. We have addressed this question with representative species accumulation curves and analyses in each individual chapter. The focus of this book is...
