Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Report of a Two Day Underwater Survey of Selected Historical Sites at Apostle Islands National Lakeshore With Considerations for Research, 1982 The Apostle Islands are remnants of Pleistocene glaciation activity. The underlying strata is a 500 million - year - old brown sandstone upon which glacially deposited soils and gravels lay. The vegetation consists primarily of broadleaf and coniferous species and has been termed northern mesic forest. The soils are mixed and range from heavy clay with little drainage to well drained sandy areas. Beach materials are primary glacial lake beach sands reduced from the sandstone strata. Submerged bottomlands were sandy and solid in the areas emined. Water clarity is good with visibility during the survey ranging from 30 to 50 feet. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
