Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Turkey Raising in California Turkey production in the United States first started along the Atlantic Seaboard and has gradually come westward. In the East as turkey production increased, disease problems multiplied until there was a definite decrease in turkey growing. In recent years eastern growers have demonstrated that by strict sanitation they can successfully grow turkeys. Clean ground, houses, feed, and stock rather than medicines are the methods used to combat disease. Prevention was found to be the only satisfactory way to control disease. During the time turkey production was on the wane in the East it grew in the western section of the United States. Less turkey and poultry population in this section and particularly the drier climate tended to prevent diseases and parasites. In recent years, however, some sections that have become densely populated with turkeys and poultry have been having severe losses through diseases, parasites, or both. It is apparent that the western turkey grower also must pay strict attention to sanitation. By modern artificial rearing methods and sanitation, diseases and parasites are much more easily controlled than when natural...
