All subjects have been treated as simply as possible and many examples are used to show exactly how different arithmetical processes are applied to practical shop problems. It is assumed that the student understands such elementary subjects as addition, subtraction, multiplication, and division of whole numbers and fractions and that he is familiar with the use of common mathematical signs for indicating the different operations referred to. If the student is not entirely familiar with the elementary arithmetical processes mentioned, it is advisable for him to study a text-book on arithmetic before attempting the solution of the problems given in...
