Design of Arithmetic Circuits in Quantum Dot Cellular Automata Nanotechnology (Studies in Computational Intelligence)

By K. Sridharan

Springer. Paperback. Condition: New. 116 pages. This research monograph focuses on the design of arithmetic circuits in Quantum Dot Cellular Automata (QCA). Using the fact that the 3-input majority gate is a primitive in QCA, the book sets out to discover hitherto unknown properties of majority logic in the context of arithmetic circuit designs. The pursuit for efficient adders in QCA takes two forms. One involves application of the new results in majority logic to existing adders. The second involves development of a custom adder for QCA technology. A QCA adder named as hybrid adder is proposed and it is shown that it outperforms existing multi-bit adders with respect to area and delay. The work is extended to the design of a low-complexity multiplier for signed numbers in QCA. Furthermore the book explores two aspects unique to QCA technology, namely thermal robustness and the role of interconnects. In addition, the book introduces the reader to QCA layout design and simulation using QCADesigner. Features and Benefits: This research-based book: Introduces the reader to Quantum Dot Cellular Automata, an emerging nanotechnology. Explores properties of majority logic. Demonstrates application of the properties to design efficient arithmetic circuits. Guides the reader towards layout design...

Reviews

The best book i actually read through. I have got read and so i am sure that i am going to going to read through yet again yet again down the road. You can expect to like the way the author compose this pdf.

-- **Ludie Willms**

Absolutely essential go through ebook. It can be rally exciting throgh studying period of time. Its been written in an exceptionally simple way in fact it is only right after i finished reading this pdf where basically modified me, modify the way i believe.
