Excerpt from *Studies in Infant Behavior II: Plantar Responses of Infants and Young Children; An Examination of the Literature and Reports of New Experiments* Almost since the beginnings of experimental work with infants, the reaction of the toes in response to stimulation of the sole of the foot has received the attention of investigators of reflexes. The popularity which this problem has been accorded may possibly be due to a seeming necessity for the student of infant reactions at some time in his career to do an experiment on infantile plantar phenomena. Whether or not this be the explanation, there are in the literature of neurology and behavior actually hundreds of papers dealing with the subject from both experimental and theoretical points of view.
