Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Original Communications, Eighth International Congress of Applied Chemistry, Vol. 4: Washington and New York, September 4 to 13, 1912; Section Iiib, Explosives The nitration is best carried out by placing 350 gms. Of a mixed acid prepared by adding 130 gms. Of nitric acid of S. G. To 220 gms. Of concentrated sulphuric acid, S. G. In a 400 cc. Beaker surrounded by an ice-salt freezing mixture. The liquid within the beaker is agitated by a propeller-shaped stirrer (driven by a belt connected with a water motor) revolving at the rate of about 250 revolutions per minute, and stirring downwards. The temperature of the liquid is recorded by a thermometer placed in the beaker in such a manner as not to interfere with the stirring. When the temperature of the acid reaches - 5c. The anisol (30 gms.) is slowly introduced from a separatory funnel drop by drop at such a rate that the temperature of the liquid in the beaker does not exceed 0c. The stem of the separatory funnel should be drawn out to facilitate the introduction of the anisol in very small drops. With the above quantities from two to three hours are required for introducing the anisol. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
