IN the Application of the Theory, explained in the forgoeing Scholium, ggK which is very universal, there often occurs a great Difficulty; because we have to do with the Curves, called Mechanical Curves; and then, if we tend to the Arithmetical Expressions by Algebra, we must for the most part have recourse to the infinite Series. Yet in some Cafes all is performed by Geometrical Lines, as will appear by the following Examples. Let us consider the right Cylinder, moved according to the Direction of 2. its Axis, running perpendicularly against the Surface of a soft Body. The Line of the Figure is a right one parallel to the Axis; such also is the Line of the Cavity; we represent both these by the same a C.
