

Hydrogen Bonding in Biological Structures

By Wolfram Saenger

Springer. Paperback. Condition: New. 569 pages. Dimensions: 9.2in. x 6.1in. x 1.3in. Hydrogen bonds are weak attractions, with a binding strength less than one-tenth that of a normal covalent bond. However, hydrogen bonds are of extraordinary importance; without them all wooden structures would collapse, cement would crumble, oceans would vaporize, and all living things would disintegrate into random dispersions of inert matter. Hydrogen Bonding in Biological Structures is informative and eminently usable. It is, in a sense, a Rosetta stone that unlocks a wealth of information from the language of crystallography and makes it accessible to all scientists. (From a book review of Kenneth M. Harmon, Science 1992) This item ships from multiple locations. Your book may arrive from Roseburg,OR, La Vergne,TN. Paperback.
