

Modular Units

By S. Lang

Springer. Hardcover. Condition: New. 360 pages. Dimensions: 9.3in. x 6.2in. x 1.1in. In the present book, we have put together the basic theory of the units and cuspidal divisor class group in the modular function fields, developed over the past few years. Let $\mathbb{H}$ be the upper half plane, and N a positive integer. Let $\Gamma(N)$ be the subgroup of $SL(2, \mathbb{Z})$ consisting of those matrices $\begin{pmatrix} a & b \\ c & d \end{pmatrix}$ such that $a \equiv d \equiv 1 \pmod{N}$ and $b \equiv c \equiv 0 \pmod{N}$. Then $\mathbb{H}/\Gamma(N)$ is complex analytic isomorphic to an affine curve $Y(N)$, whose compactification is called the modular curve $X(N)$. The affine ring of regular functions on $Y(N)$ over $\mathbb{C}$ is the integral closure of $\mathbb{C}[j]$ in the function field of $X(N)$ over $\mathbb{C}$. Here j is the classical modular function. However, for arithmetic applications, one considers the curve as defined over the cyclotomic field $\mathbb{Q}(\zeta_N)$ of N -th roots of unity, and one takes the integral closure either of $\mathbb{Q}[j]$ or $\mathbb{Z}[j]$, depending on how much arithmetic one wants to throw in. The units in these rings consist of those modular functions which have no zeros or poles in the upper half plane. The points of $X(N)$ which lie at infinity, that is which do not correspond to points on the...

Reviews

This composed pdf is excellent. It really is basic but excitement in the 50 % in the book. Your lifestyle span will likely be change when you comprehensive looking at this book.

-- **Tom Fisher**

This sort of pdf is everything and got me to searching forward and a lot more. Of course, it is engage in, nevertheless an interesting and amazing literature. I realized this ebook from my i and dad encouraged this book to find out.
