Here is the finest publication we have read right up until now. It is actually written in easy words instead of difficult to understand. It has been written in a remarkably easy way in fact it is only right after I finished reading this book in which basically changed me, modified the way I really believe.

It will regrettably prove inaccessible to many physical and social science professors who are, as evident by the profusion of elementally flawed free will defenses published by major peer-reviewed journals, far more adept at learning, communicating and applying concepts and principles than at understanding their fundamental nature. The book focuses exclusively on the physical refutation of the free will construct, concurrently addressing claims that because we are human, our choices are somehow exempt from physical law. It also delves deeply into quantum mechanical principles and phenomena relevant to the free will question, siding with Einstein, Bohm, Hawking, Krauss and others regarding the causal nature of both the macro and quantum world.
