THE ABSOLUTE RELATIONS OF TIME AND SPACE

Createspace, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.In my smaller book, The Absolute Relations of Time and Space, I gave an abbreviated account of this work and added an appendix showing how the various complicated geometries which are treated of in Einstein s generalized relativity could be obtained by means of a modified measure of interval. However, most relativists have been too busily engaged in praising Einstein to spare the time to go into my work. One result of this has been that, by taking the idea of measurement as the fundamental thing, a very large number, if not the majority, of relativists have fallen into the very serious error of asserting that the length of what they call a world-line is a minimum between any two points of it. In my Theory of Time and Space I showed (p. 360) that this is not correct. Finding that a number of writers were making this mistake, I wrote a letter which appeared in Nature (February 5, 1920, p. 599) in which I invited attention to this matter and pointed out that in what I called inertia lines the length, so far from being a minimum, was actually a maximum in the mathematical sense; while, in what I called separation lines the length was neither a maximum nor a minimum. In this letter I gave actual numerical examples to illustrate these points. I invited attention to the matter again in my Absolute Relations of Time and Space (p. 71), published in 1920. In spite of these efforts of mine, I again find this blunder cropping up in works published this year. Now it seems to me that it is a very important point since, in ordinary...
