THE JOURNAL OF THE INSTITUTION OF ELECTRICAL ENGINEERS, 1922, VOL. 60: ORIGINALLY THE SOCIETY OF TELEGRAPH ENGINEERS (CLASSIC REPRINT) (PAPERBACK)

Forgotten Books, United States, 2016. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from The Journal of the Institution of Electrical Engineers, 1922, Vol. 60: Originally the Society of Telegraph Engineers Fifty years ago Maxwell predicted that research on electricity in gases would be the avenue by which the constitution of matter might be penetrated. This has been wonderfully justified, but we are far from the end. It is easy to utilize molecular energy, to make and unmake molecules the whole science of chemistry and of organic life depends on the power to do this. There remains the stupendous step of unlocking atoms into their component electrons on an engineering scale, and the still greater feat of untwisting electrons into their mother ether. This would be the end of physical analysis; beyond it there is the problem of how to make electrons. So far as inorganic matter is concerned, that would certainly be the end of synthesis, for if, as seems probable, positive and negative electrons differ only in the direction, right or left hand, of their twists, no new kinds could be manufactured, nor could man-made matter differ essentially from that we now know.
