The bactericidal properties of ozone since having been studied and proven by Froehlich and Ohlmuller, have perhaps been more frequently investigated than any other of its properties, and the fact that bacteriologists like Pasteur, Roux and Koch have indorsed them, has left no further doubt in the minds of the most skeptical persons. Ozone oxidizes the impurities in water and renders them harmless; it discolors dirty water and still leaves no compounds harmful to the health or disagreeable to the taste. This purification is accompanied by a distinct phosphorescence of the water. In cases where muddy appearance is largely due to substances of mineral origin it is customary to partially clear the water by means of a pressure filter before ozonization. Owing to the great variation in the composition and appearance...
