Excerpt from Organic Seminar Abstracts, 1970-1971: Semester II The σ_{C5} values of Table 2 are, as a group, more accurate than those reported before, and partially for that reason the absolute values of these volumes are somewhat greater than those of Table 1. The near identity of the five quantities makes the conclusion unmistakable: there is no observable significant correlation in these systems between σ_{C5} and steric hindrance, and the differences noted before appear validly attributable to participation with non-classical charge dispersion.
