Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Practical Dynamo-Building for Amateurs: How to Wind for Any Output Of the mighty army of scientific amateurs there are thousands who would like to construct a practical dynamo, and thousands who have already made a small one, and are desirous of extending their practice with a larger machine. There are many instances where the amateur electrician has every facility, every convenience and tools at hand, wherewith to construct a dynamo and its necessary adjuncts, that will afford him 50 incandescence, or one 20,000-c.p. are lamp at will, with the same winding. Take, for example, an engineer in charge of the machinery in a large works: he has his forge, turnery, vice-bench and pattern shop, and given a rudimentary knowledge of the principles of electric lighting, and the necessary instructions, there is no reason why he should not at once gratify his own inclinations, and give his employer the benefit of the electric light. In the present series of articles the use of engineer's tools, and also a fair groundwork in the theory of electricity, including Ohm's law, is premised by the author. In the little dynamo here described and illustrated, the field-magnets consist of simple soft cast iron, not from preference, but because such material is far easier for the amateur to fit up, than the more expensive and troublesome forgings, which can rarely be obtained to correspond unless made from a die. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original...
