

On the Mutual Relations Between Anatomy, Physiology, Pathology, and Therapeutics, and the Practice of Medicine

By Marshall Hall

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1842 edition. Excerpt: .of arterial blood is circulated in asphyxia, and disease and death occur. By bearing in mind these various facts, we are enabled to appreciate the effects of partial as well as complete asphyxia, and to understand the secondary as well as the primary forms of that pathological condition. Venous blood, being deficient in oxygen, ceases to stimulate all the organs, the cerebrum, the medulla oblongata, the heart itself; and hence the loss of consciousness, the impaired respiration, the impaired action of the heart; but being also surcharged with carbonic acid, it actually poisons or morbidly irritates these same organs; and hence the gaspings, the convulsive acts of expiration, and other forms of convulsion; and we are not surprised to find that it ceases to flow along the minute and capillary vessels. I proceed to notice the different forms of asphyxia. Gradual Asphyxia. Gradual asphyxia occurs...
