Trouble has been observed in some Western states in injury to the health of trees from the use of arsenate of lead. The poison appears to penetrate the soil and be absorbed through the roots. On this account arsenic sulphide has been substituted in an experimental way, and promises to become an important insecticide. It is less soluble than other forms of arsenic, and also less expensive. External Poisons The petroleum oils are among the most important of the contact-killing insecticides. For general use kerosene is the most convenient of these oils. As kerosene does not mix with water, dilution with this liquid is not practicable. It has been found, however, that kerosene may be safely and effectively used, provided it is first emulsified with hot soapsuds. This is generally...
