Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1884 Excerpt: .Oxybeles lumbricoides. Whether it leaves its host and comes out, presumably a very difficult operation, is not known. Fishes of the great mackerel family are remarkable for their associations; thus many when young live up among the tentacles of the great jelly-fishes. The little fish, Caranx trachnrus, lives up among the tentacles, under cover of the umbrella of the beautiful medusa Chrysam-a isocela). This sea-nettle often incloses several young specimens of caranx, which we are surprised to see issuing full of life from the transparent bodies of these animals. Indeed, it is not rare to find other fishes in the medusae. Dr. Gunther, who has arranged with so much care the rich collection of fishes in the British Museum, has in his possession some specimens of Labra.r lupus, and of Gaslerosteos. which had been obtained from the interior of different medusae; and these associations have been...
