BIOLOGY LAB BASICS

**Safe Laboratory Practices & Procedures**

Below is a listing of Safe Laboratory Practices to serve as a reminder of some fundamental safety tips.

**Tip #1: Ask yourself, "What am I working with? What are the hazards?"**

- Common hazards in the laboratory include: animal, biological, chemical, physical, and radiological. If there is an accident or emergency situation involving these hazards:
- Drink immediate assistance. If you are splashed by any of these materials, use running water for at least 15 minutes or until emergency assistance arrives and provide you with different instructions.
- Report to your supervisor any accident, injury, or uncontrolled release of potentially hazardous materials - no matter how trivial the accident, injury, or release may appear.

**Tip #2: Be prepared.**

- Attend all required laboratory safety training prior to the start of your research assignment.
- Read all procedures and associated safety information prior to the start of an experiment.
- Perform only those experiments authorized by your supervisor.
- Follow all written and verbal instructions. Ask for assistance if you need guidance or help.
- Work under direct supervision at all times. Never work alone in the laboratory.
- Know the locations and operating procedures for all safety equipment. This includes the eyewash station and safety shower.
- Know the locations of the nearest fire alarms and at least two ways out of the building. Never use an elevator in emergencies.
- Be alert and proceed with caution at all times in the laboratory. Immediately notify the supervisor of any unsafe conditions.
- Know the proper emergency response procedures for accidents or injuries in the laboratory.

**Tip #3: Prevent potential exposure.**

- Conduct yourself in a responsible and professional manner at all times. No practical jokes.
- Dress for work in the laboratory. Wear clothing and shoes that cover exposed skin and protect you from potential splashes. Tie back long hair, jewelry, or anything that may catch on equipment.
- Never eat, drink, beverages, chew gum, apply cosmetics (including lip balms), or handle contact lenses in the laboratory.
- Use a chemical fume hood or biohazard cabinet, as directed by your supervisor.
- Observe good housekeeping - keep aisles clear.
- Report damaged electrical equipment to the supervisor. Do not use damaged electrical equipment.
- Do not leave active experiments unattended. Never leave anything that is being heated or is visibly reacting unattended.

**Tip #4: Protect yourself, others, your research, and the environment.**

- Practice good personal hygiene. Wash your hands after removing gloves, before leaving the laboratory, and after handling a potentially hazardous material.
- While working in the laboratory, wear personal protective equipment - eye protection, gloves, laboratory coat - as
