Not illustrated. 1893 Excerpt: .fixed point is obtained by immersion in distilled water. This latter point is called 10, the interval is divided into 10 equal parts and the graduation is continued upwards. As with the other instrument, the true value of a division is uncertain. We shall follow the values obtained by Gerlach, using the formula $S = 135 - 88 + N$ Taken from Gerlach, Dingler's Journal, 1870. Table R Value Of Degrees Of Baume's Hydrometer For Light Liquids At 12-5 C. 98. Harmonically-divided Densimeters.--If a densimeter could be constructed in which the successive divisions expressed equal difference of density, it would possess an advantage over the instrument whose construction we have described, for it would be much easier to read, and the use of awkward numbers would be avoided. Unfortunately, the accurate graduation of such an instrument is decidedly complicated. We know that if V be the volume of the part immersed in a liquid of density S , then $VS = W$ where W is the weight of the hydrometer. In like manner, for liquids of densities S, S we have $VS = W$ and $V S = W$, whence $VS = VS = VS$, etc. Now if S, S, S , etc., be a series of densities increasing in arithmetical progression such as $1, 1 + b, 1 + 2b$, etc., we shall have for the corresponding volumes V, v, x etc. Thus as the densities increase in arithmetical progression the volumes immersed...
