The Remote Sensing and Geographic Information System have proved to be very important in assessing and analyzing forest cover changes. Satellite- based Remote Sensing, by virtue of its ability to provide synoptic information of forest cover at a particular time and location, has revolutionized the study of forest cover changes. The temporal information on forest cover helps identify the areas of change in a region. The use of Geoinformatics has enabled us to assign spatial connotations to forest cover changes, namely, population pressure, climate, terrain, etc. which drive these changes.
