

Hydrogeology and Analysis of Aquifer Characteristics in West-Central Pinellas County, Florida: Open-File Report 99-185

Filesize: 2.04 MB

Reviews

This is an incredible ebook which i actually have ever go through. This can be for those who statte that there had not been a really worth reading. I am just quickly can get a delight of reading a published book.

(Ms. Colleen Ziemann V)

HYDROGEOLOGY AND ANALYSIS OF AQUIFER CHARACTERISTICS IN WEST-CENTRAL PINELLAS COUNTY, FLORIDA: OPEN-FILE REPORT 99-185

To download **Hydrogeology and Analysis of Aquifer Characteristics in West-Central Pinellas County, Florida: Open-File Report 99-185** eBook, you should access the link under and download the ebook or have access to additional information which might be highly relevant to HYDROGEOLOGY AND ANALYSIS OF AQUIFER CHARACTERISTICS IN WEST-CENTRAL PINELLAS COUNTY, FLORIDA: OPEN-FILE REPORT 99-185 book.

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.The U.S. Geological Survey, in cooperation with Pinellas County, Florida, conducted an investigation to describe the hydrogeology and analyze the aquifer characteristics in west-central Pinellas County. A production test well and four monitor wells were constructed in Pinellas County at Walsingham Park during 1996-97. Water-quality sampling, static and dynamic borehole geophysical surveys, and hydraulic tests were conducted at the wells to delineate the hydrogeology at Walsingham Park. A 9-day aquifer test was conducted to determine the hydraulic characteristics of the aquifer system and observe the changes in water quality due to pumping. A numerical model was constructed to simulate the aquifer test and calculate values for hydraulic conductivity and storage coefficient for permeable zones and confining units at Walsingham Park. Final calibrated values for hydraulic conductivity for the different permeable zones and confining units at the test site were 18 feet per day for Upper Zone A, 750 feet per day for Lower Zone A, 1 foot per day for Zone B, 1×10^{-4} feet per day for the intermediate confining unit, and 10 feet per day for the semiconfining unit separating Upper Zone A and Lower Zone A. Final calibrated values for storage coefficient were 3.1×10^{-4} for Upper Zone A, 8.6×10^{-5} for Lower Zone A, 2.6×10^{-5} for Zone B, 3.1×10^{-4} for the intermediate confining unit, and 4.3×10^{-5} for the semiconfining unit separating Upper Zone A and Lower Zone A. Estimates of transmissivity for Upper Zone A and Lower Zone A were about 2,500 and 37,500 feet squared per day, respectively.
