Zhu Shanying editor of molecular biology and genetic engineering experiments tutorial is divided into five 24 experiments: DNA recombinant articles (an experiment to test seven). mainly related to recombinant DNA technology; prokaryotic expression papers (eight to experimental test 11). content including foreign genes in E. coli-induced expression and detection technology; transgenic plant articles (experimental second to experiment 19). describes the production of transgenic plants and testing techniques; recombinant baculovirus articles (experiment 20 to experiment twenty B). including the construction of recombinant baculovirus and application technologies; open test papers (experiment 23 to experiment xxiv). how to identify microorganisms using molecular biology techniques and the use of molecular markers analysis of human genetic diversity sex. One. DNA recombination articles focused on the genetic manipulation of basic skills training. independent of the rest of the chapter focuses on the design. the integrated use of ability. The book also has four appendices. with a strong reference value and practical value. Contents: papers first recombinant DNA experiment a solution preparation and equipment preparation experiment two plasmid DNA extraction and PCR detection of Experiment 3 Experiment 4 gene was amplified target gene of recovery and purification of the target gene experimental five enzymes with plasmid DNA analysis of experimental six-cut plasmid vector gene and the connection and transformation experiments seven recombinant plasmid second experiment eight articles prokaryotic expression of E. coli expression vector design and construction of nine experiments with recombinant protein expression experiments ten SDS-PAGE analysis re-Purification realFour Satisfaction guaranteed, or money back.
