A primitive group will be defined as a group which does not leave invariant a differential equation of the first order. J Such a group is at least three-parametric, as a two-parametric group possesses a differential invariant of the first order, J say, and therefore an invariant differential equation of the first order, f (J) = constant. 1 It will first be necessary to show that any group in two variables and of more than two parameters leaves invariant at least one differential equation, which is integral and algebraic in the derivatives dy/dx, (Pyjdx1, etc., involved. Let Xf = dfjdx + n df.dy indicate any one of the infinitesimal transformations of the group. If we extend these n times, and write yl, y2, yn for dy/dx, (Py/dx2, dny/dx, and p, q, px, p2, pn for dfjdx, dfjdy, dfjdy, Sfjdy., dfjdy, respectively, we easily find these extended transformations to be of the form 6- + Vq + lVx + ix)yY-+ + + (PnVn + Qn)P- Presented to the Society April 27, 1901.
