Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1895 Excerpt: . easily imparts oxygen to other substances; sulphur, mixed with six times its weight of PbO., may be ignited by friction; hence this oxide is a common ingredient in lucifer-match compositions. Its oxidising property is frequently turned to account in the laboratory; for example, in absorbing sulphur dioxide from gaseous mixtures by converting it into sulphate of lead; $PbO + SO_2 = PbSO_4$. Dioxide of lead is not dissolved by dilute acids, and has no basic properties, although certain salts of the type PbX_4 are known; it is even sometimes called plumbic anhydride, for it acts upon potassium hydroxide, yielding potassium plumbate (K_2PbO_4), which has been crystallised from an alkaline solution, but is decomposed by pure water. Lead dioxide evolves O_2 from HCl when heated, and gives, at first, a brown solution (containing $PbCl_4$) which yields a brown precipitate with ammonia, but if the solution be boiled till all the Cl is expelled, it becomes colourless $PbCl_2$, and gives a white precipitate with ammonia. PbO is converted into PbO_2 , by ozone and by hydrogen peroxide. Lead hydroxide, $Pb(OH)_2$, has not been obtained, but $Pb(OH)_2 \cdot PbO$ is formed as a white precipitate when air and water, free from CO_2 , attack lead. The same substance is precipitated by alkalis from solutions of lead salts. It becomes PbO when heated to $145^\circ C$. The compound $Pb(OH)_2 \cdot 2PbO$ crystallises in octahedra from a solution of basic lead acetate mixed with ammonia. Lead nitrate, $Pb(NO_3)_2$, crystallises in white octahedra from a solution...
