

## Bastadins and Related Compounds from the Marine Sponges Ianthella basta and Callyspongia sp:

By Sofia Ortlepp

Cuvillier Verlag Jun 2008, 2008. Taschenbuch. Condition: Neu. Neuware - Sponges are soft bodied and sessile animals, which lack spine and shell (Armstrong & Quigley 1999). For their defence against fouling organisms, predators, and neighbours competing for space, sponges rely on bioactive natural products instead (Proksch et al. 2002). In this project the marine sponge Ianthella basta Oken, 1815, belonging to the order Verongida Bergquist, 1978, was investigated. Species of the order Verongida are biochemically characterised by the production of brominated tyrosine derivatives. (Bergquist & Cook 2002) Several bastadins and a brominated phenyl acetic acid were isolated. One other sponge was investigated too, Callyspongia 'blue', which yielded a brominated diphenyl ether (compound 5). Bastadins are characteristic secondary metabolites of the sponge I. basta. They are tyrosine-derived, brominated, oxime-bearing macro bis-diaryl ether tetrapeptides, which can be either cyclic or linear. 36 bastadin and hemibastadin derivatives are known; additional to these one new congener named bastadin-24 was isolated during this work. The bastadins do not only inhibit barnacle larval settlement, thrombocyte aggregation, display cytotoxicity, inhibit bacterial growth as well as protein kinases, as described in this thesis, but do also show for example antagonistic effects on the ryanodin receptor and calcium channels in the...

### Reviews

*Comprehensive guide! Its this sort of very good go through. It generally is not going to price too much. Its been designed in a remarkably basic way which is simply following i finished reading this pdf where really changed me, affect the way i really believe.*

-- Prof. Jeremie Blanda DDS

*A must buy book if you need to adding benefit. It can be rally intriguing through reading time period. I am easily could get a pleasure of looking at a composed book.*

-- Dr. Julius Goodwin DDS
