RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 258 pages. Original publisher: Washington, DC: Division of Engineering, Office of Nuclear Regulatory Research, U. S. Nuclear Regulatory Commission, 1994. OCLC Number: (OCoLC)237799333 Subject: Stainless steel -- Effect of temperature on. Excerpt: . . . 3 Experimental Procedure 3. 1 Material Procurement Material was obtained from various experimental and commercial heats of CF - 3, CF - 8, and CF - 8M (ASTM Specification A 351) cast stainless steels in differing product forms and sec-tion thicknesses. Six experimental heats of cast stainless steel were procured in the form of 76 - mm - thick slabs. Materials from the commercial heats included sections of four different centrifugally cast pipes (CF - 8 and CF - 8M grades), a pump impeller (CF - 3 grade), and a pump casing ring (CF - 8 grade). The outer diameter and wall thickness of the cast pipes ranged from 0. 6 to 0. 9 m and 38. 1 to 76. 2 mm, respectively. A cover plate assembly from the recirculating pump of the KRB reactor in Gundremmingen, Germany was also procured. The cover plate assembly was in service for ap-proximately eight effective full power years (efyps) at a service temperature of 284 C (543 F). The plate assembly was decontaminated and samples were obtained from the inner 25 - mm - thick region of the plate. The average temperature of the samples was estimated to be 280 C. 3. 2 Material Characterization The various cast materials were characterized to determine their chemical composition, hard-ness, grain structure, and ferrite content and distribution. All castings were examined in the three orientations as well as at different locations, namely, material near the center and...
