Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1905 Excerpt: .can easily be separated from the capsule of the lens; it is then said to be ripe for operation, since it can be extracted without leaving much if any of the cortex behind, thus diminishing the chances of subsequent opacity (after-cataract). Fig. 200.--Senile Nuclear Cataract. A, Seen with Oblique Illumination; J3, Section of the Lens; C, Seen wid the Ophthalmoscope. 4. Hypermature Stage.--The cataract may continue in the mature stage for a long time. If changes continue, the surface of the lens loses its radial markings and becomes homogeneous, or presents irregular spots. The cataract may continue to lose water, and thus a shrunken, dry, flattened mass results (shrunken cataract), with some deepening of the anterior chamber. Or, the cortex may become soft, liquid, and milky, and the nucleus sink to the bottom of this fluid (Morgagnian cataract), the cataract appearing white with a brownish coloring below. Very old hypermature cataracts often present the deposit of cholesterin or of lime salts; the latter change (chalky cataract) is found chiefly in complicated cataracts. The anterior capsule may become thickened and opaque (capsulo-lenticular cataract). The lens (and iris) may become tremulous through stretching of the suspensory ligament. For these reasons, operation upon overripe cataract is less favorable and more difficult than during the mature period. Pathology.--Senile cataract results from shrinkage of the nucleus together with the lens fibres, and presence of fluid in the spaces thus created. The lens fibres then swell, become cloudy, and disintegrate. The nucleus...
